```
COS 226 Fall 2009 Class Exercise 3 9 questions; 3 pgs. Due 2009-09-08 3:15 p.m.
(c)2009 Sudarshan S. Chawathe
```

1. List the members of your group below:
2. List the indices of the array locations probed when the array a depicted below is searched for each of the following elements using sequential search:
(a) 14
(b) 18
(c) 33

| i |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| a[i] | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 |
|  | 23 | 57 | 36 | 92 | 18 | 63 | 43 | 75 | 12 | 40 | 14 | 97 | 98 | 31 | 5 |

3. Populate the following table for sequential search of the array in Question 2. Show your work and justify your answers.
successful search: unsuccessful search:

| number of array probes |  |  |
| :---: | :---: | :---: |
| minimum | maximum | average |
|  |  |  |
|  |  |  |

4. Reorganize the array of Question 2 for binary search and depict the resulting array below, using the tabular form used there.
5. List the indices of the array locations probed when the array a depicted below is searched for each of the following elements using binary search:
(a) 14
(b) 18
(c) 33
6. Populate the following table for binary search of the array in Question 5. Show your work and justify your answers.

|  | number of array probes |  |  |
| ---: | ---: | :---: | :---: |
| sum minimum | maximum | average |  |
| successful search: |  |  |  |
| unsuccessful search: |  |  |  |
|  |  |  |  |

7. Repeat Questions 5 and 6 using interpolation search.
8. Determine the maximum contiguous subsequence of the sequence

$$
-3,1,3,5,-10,3,38-1,3,10
$$

and justify your answer.
9. Provide a linear-time algorithm for the maximum contiguous subsequence problem. Explain why it is correct and why its running time is linear.
