Today’s topic: catch up, review. §§ 23.*, 14.3.
Next class: Midterm Exam 2.

1. List the members of your group below. Underline your name.

2. Trace the execution of Dijkstra’s shortest-path algorithm, with a pairing heap, from source vertex $A$ on the following graph. Follow the textbook’s algorithm and conventions. Depict (1) the $D_w$ values and (2) the state of the heap after the computation of the shortest path to each vertex.
3. Repeat Question 2 using skew heaps.
