Today Fundamentals of algorithm analysis; dynamic programming. §§¹ 2.*, 3.*, 15.{2,3}. **Next class** Dynamic programming. §§ 15.4,15.5. **Reminders** Homework. Newsgroup. Reading. Coding. Practice. Don't fall behind.

- 1. List the members of your group below. Underline your name.
- 2. Prove or disprove: If $f(n) = \Theta(g(n))$, $g(n) = \Omega(h(n))$, and $h(n) = \omega(q(n))$ then $f(n) = \Omega(q(n))$.

3. Provide pseudocode for *selection sort*, using the textbook's style.

¹Throughout this course, section numbers such as these will, by default, refer to the textbook: Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, and Clifford Stein. *Introduction to Algorithms*. MIT Press, 3rd edition, 2009.

4. Sketch the proof of correctness of the pseudocode in Question 3 using loop invariants.

5. Analyze the running time of the pseudocode of Question 3 following the method used in the textbook's analysis of insertion sort.
