

This assignment focuses on preparing effective slides for Capstone presentations. The target time is 12 minutes for the main presentation, followed by 2 minutes of questions.

1. Create a clean PDF version of the slides for your final presentation. If your presentation has elements that do not map well to a PDF version (e.g., video segments, demos), include slides with the appropriate comments in their places.
2. Create a document (PDF) that outlines the following information for each slide of Question 1:
  - (a) Budgeted time.
  - (b) Main points made orally (whether mentioned on the slide or not).
  - (c) Primary target audience group (general public, computer scientist, or area expert).
  - (d) Features that help match the material with the target audience.

Include also any additional notes that help in interpreting how the slides relate to the live presentation.

3. Describe, in detail, how the presentation would be altered if the target time were 8 minutes. Indicate which slides would be skipped or substantially altered, as well as how the material in Question 2 would be changed.
4. Repeat Question 3, but for a target time of 15 minutes.

**Submission:** Submit your work electronically as a single package with all the above material using the procedure outlined in the syllabus and the naming scheme

*cos497-hw03-Lastname-Firstname-N.pdf*.
